WHAT IS ACCOUNTING?

Accounting involves carrying out the fundamental tasks of preparing, analyzing, and verifying financial documents in order to provide information to clients. Accountants and auditors help to ensure that businesses are run efficiently, public records are kept accurately, and taxes are paid properly. Accounting also provides the opportunity to analyze and influence corporate strategies, evaluate new business opportunities, and develop a wide set of business skills. Government accountants maintain and examine the records of government agencies and audit.

OUTLOOK

The accounting industry is projected to grow by 7 percent from 2020 to 2030, according to the U.S. Department of Labor (DOL), or faster than the average for all occupations. As the economy grows, and more companies go public, there will be a need for individuals who can prepare and examine financial records.

Technology is expected to affect the field over the next 10 years. With cloud computing, professionals can offer real time work to clients anytime/anywhere while management software systems are allowing for digitized content in a more easily accessible format.

The field is expected to grow in four key areas:

- Environmental Accounting
- International Accounting
- Financial/Estate Planning
- Investigative Accounting
