WHAT IS BUSINESS ANALYTICS?

Students in Business Analytics gain a strong foundation in business and data analytics to be coupled with a second business major or minor or a minor in computer science. Students gain expertise in many areas and are prepared for exciting careers with business analytics roles within media and marketing firms, banks, hedge funds, consulting firms and sports teams.

Organizations are in the process of developing the ability to aggregate, analyze, and monetize the growing surge of available data to gain a competitive advantage in their fields. The field is made up of several related activities, including data mining, analytical processing, querying and reporting. There is great potential for students of business analytics for future leadership roles in this field and in related industries.

WHAT CAN I DO WITH THE MAJOR?

Business Analytic professionals are needed across most industries, as almost all organizations require some form of data management. Specific areas can range from healthcare organizations to technology firms to financial institutions to nonprofits. Some examples of types of organizations that use business analytics include sports teams, manufacturers of consumer goods, restaurant chains, television channels, and banks.

TRACKS IN THE MAJOR

The following options are available within the major:

SALARY EXPECTATIONS

The Bureau of Labor Statistics does not collect salary data and make employment outlook projections for decision scientists. Decision scientists are classified as operations research analysts or statisticians; both positions earn a median annual wage of more than \$85,000 and are projected to grow between 25% - 33% from 2020 - 2030.

Decision scientists are employed across several fields, such as advertising and marketing, human resources, insurance and supply chain management and logistics. These professionals can be found in virtually any type of business.

The Bureau of Labor Statistics (BLS) projects that the number of financial analyst and management analyst positions will grow by 6% and 14%, respectively, between 2020 and 2030. Additionally, the number of market researcher positions should experience even greater job growth, with a projected increase of 22%. With additional training and work experience, workers can advance into leadership positions or pursue consulting and entrepreneurial opportunities.
