WHAT IS MANAGEMENT?

Business management is the process of planning, coordinating and controlling a business. To survive in the long run, a business must create sufficient value for its customers so that its revenues exceed its total costs. The overall task of business management is to successfully address the problems that confront a business in its role as a value-creating organization and to make sure that the organization is operating efficiently. A career in management can extend to many different industries and can include anything from managing projects to people to materials to operations.

This guide touches upon some examples in the management field that exist in a number of industries; please see individual industry guides to locate more specific management opportunities.

OUTLOOK

The U.S. Department of Labor predicts that "Employment of management occupations is projected to grow 9% from 2020 to 2030, faster than the average for all occupations, which will result in about 906,800 new jobs. Employment growth is expected to be driven by the formation of new organizations and expansion of existing ones, which should require more workers to manage these operations."
